Rohto Pharmaceutical (4527) research system · how one weekly run flows

Fukuhara Seminar · Hugo Hayashi · skill flow v3 (2026-10-30). Read top to bottom: the order the system runs (middle), what I do and decide at each point (left), and the outside data each stage pulls (right). "LATEST" lines quote the newest files. Data site: **h-hayashi-ctrl.github.io/rohto-dashboard**.

→ pipeline order ⇢ I act **YOU DECIDE** stops for a human **AUTO GATE** a rule decides ① – ⑦ stages A1 fundamental A2 alternative data A3 competitor

ME · INPUTS AND DECISIONS | **THE SKILLS** · IN RUN ORDER | **OUTSIDE DATA** · PULLED LIVE

Before a session
you
Run the cycle the day before the upload deadline so every number is from the same week.

0 The clock starts a run — no command needed

Weekly timer
`fukuhara-agents.timer · weekly_run.sh`
systemd user timer, Monday 09:00 (catches up if the PC was off): Agents 1 → 2 → 3, then the health check. Log in output/logs/.
LATEST last weekly run 2026-10-26 · every Monday 09:00

→ **Weekly cycle on request**
`skill: weekly-research-run`
Orchestrator skill: ask Claude Code to "run this week". Same order; adds the debate only when I ask.

→ **Session calendar**
`syllabus`
Uploads are due one day before each session; the cycle is rerun the day before.
LATEST next: Session 5 Fri 13 Nov · upload by 12 Nov

runs ① → ⑦

1 Collect public data — every run · always

A1 Market data
`fetch_market.py · market-data`
Price, consensus EPS, analyst targets, 6 years of monthly prices. Secondary source: used for checks and comparison only.
LATEST price ¥2,738 (2026-10-30) · consensus FY27 EPS ¥162.0 (11 analysts)

→ **A1 Filings**
`fetch_edinet.py · filing-extraction`
5 years from the annual reports (XBRL); every number keeps its document, page and tag. Rerun when the fiscal year changes.
LATEST 85 values extracted · checked against the csv

→ **A2 Alternative data**
`fetch_altdata.py · alt-data-fetch`
Brand and symptom searches, share of search in 4 categories, Tokyo UV, JNTO visitors, cosmetics exports to China, Rakuten top-30. Keeps the last good data when a source fails.
LATEST 12 search terms · 2026-10-30

→ **A3 Competitor disclosures**
`fetch_competitor_news.py · competitor-disclosures`
TDnet filings of Rohto + 7 peers for 180 days; reads up/down from the title, or the PDF while it is still online (~30 days).
LATEST 57 filings from 8 companies · 2026-10-30

Public sources
robots and terms respected
EDINET API · Yahoo Finance (yfinance) · Google Trends · Open-Meteo · JNTO · UN Comtrade xlsx · Rakuten Ichiba API · TDnet list via yanoshin WebAPI (no key)

every run

Fix what is flagged
you
Check each gap in the original filing; correct the csv myself (student-corrected + note). The agent never overwrites a value.
LATEST 4 gaps to check in the filings

2 Check the run — always

A1 Data integrity
`baseline_check.py`
Missing fields, mixed units, conflicting values, unverified and secondary sources → error / warning / info. Any error fails the health check.
LATEST error 0 · warning 21 · info 14

→ **A1 Cross-source check**
`baseline_check.py`
Filings vs. yfinance; a gap above 0.5% becomes SOURCE_MISMATCH. The agent never decides which one is right.
LATEST 4 gaps to check in the filings

→ **Health check**
`check_health.py`
AUTO GATE
Fails if a forecast source is missing or older than 8 days, Rohto's own filings are missing, any agent has an error, or outputs come from different runs. No debate on fail.
LATEST OK · 13 ok / 1 warn / 0 fail · 2026-10-30 15:33

store counts given? (otherwise skip to ④)

Collect a store visit
you
Count facings by the protocol; shelf photo, no faces. Never enter a count I did not see.
LATEST no store visits yet

3 Field layer — only with my counts

A3 Observation sheet
`field/test_observations.csv · protocol.md`
Course schema: facings, price, promotion, stock-out and special conditions; one row per SKU per visit, same store and same time slot.
LATEST no store visits yet

→ **A3 Shelf share + stock-outs**
`competitor_check.py`
AUTO GATE
Rohto facings ÷ all facings, change over ≥3 visits of the same store × category; stock-out rate vs. peer national brands. Scored only when the rule passes.
LATEST waiting for ≥3 visits per store × category

→ **A3 Field data quality**
`competitor_check.py`
Flags bad facing counts, too few visits and sale or renovation days. Nothing is filled in.

weekly: Agents 1 and 2

Read and decide
you
Every placeholder is tagged source: agent. Accept it or replace it in the assumptions file with source: student and a reason, then rerun.
LATEST 39 placeholders still tagged source: agent

4 Evidence → forecast → value — weekly · Agents 1 · 2

A1 Agent 1 · Forecast
`baseline_check.py · baseline-check`
Company guidance + growth and margin assumptions → FY27–28 EPS and next-12-month EPS; gap to consensus explained, not copied.
LATEST NTM EPS ¥162.1 · implied P/E 19.0×

→ **A1 Agent 1 · Own multiples**
`baseline_check.py`
P/E and EV/EBITDA on next-12-month numbers; target P/E checked against the 6-year P/E band.
LATEST ¥2,901 (P/E ¥2,918 · EV/EBITDA ¥2,883)

→ **A1 Agent 1 · Peer valuation**
`peer_check.py · peer-valuation`
Median P/E and EV/EBITDA of 6 peers, ROE–P/B regression, P/E decomposition; blended with own multiples by the peer weight.
LATEST peers ¥3,251 × 0.5 → Agent 1 ¥3,076

A2 Agent 2 · Alt signals
`alt_check.py · alt-signals`
AUTO GATE
Fiscal-year-to-date YoY × elasticity → Japan revenue → EPS → target price (a proposal). Confidence +0.05 when signals agree, −0.05 when they conflict.
LATEST brand +13.1% · symptoms -3.3% → Japan revenue +1.1% · TP +¥26 · confidence 0.30 → 0.25

Agents 1 and 2 done

5 Agent 3 · Competitor intelligence — weekly · new · Session 4

A3 Event classes
`fetch_competitor_news.py`
12 classes in priority order (TOB, guidance, M&A, product and price, strategy, impairment, restructuring …). My own entries are kept on every refetch.
LATEST 6 peer events flagged (restructuring, M&A) in 180 days

→ **A3 Guidance direction**
`data/competitor/disclosures.csv`
YOU DECIDE
When neither the title nor the PDF says up or down, the row stays unknown and is not scored until I read the filing.
LATEST 1 revision without a direction (Rohto 2026-08-06)

→ **A3 Operating scorecard**
`competitor_check.py · competitor-check`
Revenue growth and operating margin vs. the peer median (company forecasts); flags fiscal-year mismatch and acquisition-driven growth.
LATEST growth Rohto 8.3% vs median 4.0% (+1) · margin Rohto 12.1% vs median 9.7% (+1)

Fill what the agent cannot read
you
YOU DECIDE
Enter the direction of each unknown revision; confirm whether Rohto's growth includes the Thann Oryza acquisition.
LATEST 1 revision without a direction (Rohto 2026-08-06)

A3 Share of search
`competitor_check.py`
Rohto's share in 4 categories vs. last year. Same data as Agent 2, so it moves the multiple only, never EPS (no double count).
LATEST +1.56pt across 4 categories (+1)

A3 Ad & promotion spend
`fetch_ad_spend.py · competitor-ad-spend`
Advertising + sales promotion from the annual reports (XBRL) of Rohto and 7 peers; promotion efficiency = sales growth − A&P growth vs. the peer median.
LATEST A&P 18.2% of sales · sales +11.4% vs A&P +8.9% → +4.7pt vs peers (+1)

A3 3C × 4P map
`competitor_check.py (framework)`
Every piece of evidence filed under Customer / Competitor / Company and Product / Price / Place / Promotion, marked scored, reference or waiting. Price is shown, never scored.
LATEST Customer scored · Competitor ref · Company scored · Product ref · Price ref · Place ref · Promotion scored

A3 Peer-multiple premium
`competitor_check.py`
AUTO GATE
+1 / 0 / −1 per item × 2%, capped at ±6%, on Agent 1's peer valuation. Confidence +0.05 when ≥3 items agree; never raised without store data.
LATEST score +4 → +6% → TP +¥98 (¥3,076 → ¥3,174) · confidence 0.25 → 0.25

Competitor filings
no login, no personal data
TDnet (8 companies) · TDnet PDFs read with pdftotext · EDINET annual reports (A&P) · Google Trends share of search · Rakuten ranking (saved)

all three agents done · health check OK

Read the debate
you
YOU DECIDE
Read debate_log.md; accept or override the moderator's number and write why. Agent numbers stay labelled as agent numbers.

6 Debate and position — when I ask

Debate
`debate.py · valuation-debate`
AUTO GATE
Starts only if the health check passes and all three agents have a proposal. Opening → rebuttal → final; a moderator weights the three.
LATEST 2026-10-20 · 2 agents · agreed ¥3,074 · 3-agent debate not run yet

→ **Final target price**
`debate_log.md · final_valuation.json`
YOU DECIDE
The agents propose; I set the final target price and confidence for the upload, with reasons.
LATEST proposed ¥3,074 · confidence 0.25 · neutral

→ **Position**
`peer_check.py (active view)`
Expected return − 6% benchmark = alpha; × confidence → overweight / neutral / underweight at ±0.5%.
LATEST Agent 1: return 14.2% · alpha 8.2% × 0.25 = 2.0% → overweight

approved

Send
you
The weekly timer sends the agent cards; the site and the skill pack go out only when I run them. Keys only in .env.

7 Publish — after I run it

Class dashboard
`dashboard_connector.py · dashboard-report`
Outputs, monitors and activity for each agent card; anything unsent is queued and resent next run.
LATEST 3 agent cards

→ **Data site**
`publish_site.sh · build_dashboard_data.py`
GitHub Pages charts rebuilt from the agent outputs and raw data; no new calculation.
LATEST data rebuilt 2026-10-30 15:34

→ **Skill pack**
`build_skill_pack.py`
All skills, scripts, data and this flow in one zip for my partner; keys are never included.
LATEST rohto-agent-skills_2026-10-30.zip · 0.4 MB

What v3 changes vs the 22 Oct skill tree

- **Shows the run order and the gates,** not only the parts: where a rule stops the run and where I decide.
- **New agent: Competitor intelligence** (Session 4, individual): disclosures, scorecard, share of search, shelf, ad spend, premium.
- **One skill = one task** (SNU workshop): 13 skills with Role / Goal / Tools / Rules / Other, one of them an orchestrator.
- **3C × 4P:** Agent 3 files every comparison under the 3Cs and 4Ps; ad & promotion spend from annual reports added.
- **New health check:** the debate will not start on stale, missing or mixed-run data.
- **Three-agent debate;** Agent 2 checks that search share is not counted twice.

Rules every stage follows

- The agents extract, check, calculate and challenge; I decide.
- Missing data stays missing; nothing is imputed; no store data is invented.
- Every input is tagged agent / company / student, with a reason.
- Every warning is shown; confidence is never raised on weak evidence.
- Keys only in .env; never in code, logs or the skill pack.

Course work, not investment advice. Generated by scripts/build_skill_tree.py from the latest output files.
